Skills

HTML

CSS

JavaScript

React

TypeScript

Sass

Express

Node.js

MongoDB

I first gained an interest in web development many years ago when I created my first website. Although it was only made using HTML and looked rather basic, creating something digitally using my own intuition and seeing it displayed on a computer screen gave me an incredible sense of excitement and accomplishment. Having always viewed myself as a creative person with a great amount of computing knowledge, I soon came to realise that web development perfectly aligned with my skill set. It has since then offered an engaging challenge to continually learn and improve my skills in creating high-quality websites and web-based applications.

Web Development Experience

- Successfully completed the development of multiple mobile-friendly websites within 2 week timeframes using HTML, CSS, and React

- Worked with 4 people to help Agency access and use client data in custom web application by implementing methods to fetch data from company REST API

- Saved organisation time by using MongoDB to provide a simple NoSQL database storage solution to store customer information

- Developed 3 applications with custom back-end servers using React, TypeScript, Sass, Node.js, and Express

- Used Figma to provide the designs for over 15 different websites

Work History

02 - 2022 - current

Web Developer
Learn&Co - London, United Kingdom

- Worked as a team to build the main web application with React, making use of React hooks and props

- Boosted productivity by creating new web pages and components from scratch well before the given deadlines

- Made application accessible to all clients by ensuring all components were fully responsive for all of the top 50 mobile and tablet devices
